**December 2012**

Here we have another collaboration with Muticyl and Unipunch tooling which made for an excellent productive, flexible, and cost effective punching machine.

One of our customers contacted us for a solution to a sheet metal punching application they had. The need was for 13 holes to be punched along 3 edges of a large panel - but with both positional adjustment and gaged selection options on some of the holes. The result was a resounding success; a custom machine with 7 cylinders showing many of the benefits of Multicyl - versatility, power, punching speed, and safety. We will let the video tell the story!

If you use unitized tooling in your manufacturing process and you want to do it BETTER, or if you are in need of a hole punching solution - CONTACT MULTICYL.

**Multicyl: Boxed in Canada but *punching all over the world!***

Use our **Tonnage Calculator** to determine

your force requirements.

To use our tonnage calculator select either the hole diameter or shear length option. Then select your material or fill in the tensile strength of the material you are using (KSI). Fill in the rest of the data and hit calculate. You will be given the tonnage requirement and a list of potential Multicyl cylinders for the application.
