November 2016

A Canadian dock manufacturer came to Multicyl with a need to cut the end of their 4" x 1/8" wall aluminum channel to length - and to complicate matters they needed the cut to be both on an angle and through two walls.

We used the 12.5 tons and 1/2" power stroke provided by our DX 25-28-16 Multicyl with **custom dual cutting die sets** to create a surprisingly simple solution.

The compact size and ease of the air operated Multicyls allowed the customer to position twin right hand left hand units together in a small bench mounted work cell located conveniently beside other operations that the extrusions needed to be processed through.

The result was an **efficient and cost effective solution** - and the customer didn't need to provide anything but an air supply.

For a solution to your **custom application** please [contact us!](#)
